MEDIXSAFE 'FIRSTS' MAKE THEM FIRST-RATE CHOICE FOR PROPERLY SECURING PHARMACEUTICALS

Memphis, Tennessee . . . January, 2018

MedixSafe, a leader in the access control cabinet market, brings to market first rate security solutions for properly storing pharmaceuticals. As the first company to require triple authentication, PIN, CARD & biometric on a narcotics cabinet, MedixSafe provides the very best in key control for pharmaceutical workers. That's due in large part to the fact that MedixSafe has delivered an impressive list of "firsts" that have translated into unprecedented product offerings.

Among them, MedixSafe was the first manufacturer to:

Feature a fingerprint reader on its narcotics cabinets.

Incorporate Wi-Fi into its narcotics cabinets so the user would not have to go the ambulance to change users or retrieve access history.

Require dual custody (two different users) before entry is allowed.

MedixSafe offers a large variety of sizes from very small to very large created to customer specifications/requirements. "MedixSafe has dedicated itself to delivering the best in key control," says Jim Turner, President, MedixSafe. "From EMS workers to medical organizations required to protecting patients' records and storing equipment and drugs, our access control cabinets allow them to control and organize their critical keys and allow access only to those who should have it. MedixSafe has continued to grow because we've paid attention to what the customer needs and wants."

MedixSafe manufactures two key cabinets - The Key Care Cabinet which connects directly to an access control and the standalone Key Access Ready Enclosure (KARE). The **Key Care Cabinet** accommodates over 1000 users; provides multiple credential or biometric access and an audit trail of up to 50,000 events; is remote Ethernet Network capable; has a manual key override, and comes with easy to identify key tags with extra large snap open windows. The **Key Access Ready Enclosure (KARE)** is a heavy duty key control cabinet with an HID format card reader and key override built right into the electronic lock. Much more than merely a place to store keys, it gives the user control over their keys by limiting access to authorized users only and letting them know who has accessed keys and when.

ABOUT MEDIXSAFE: A leader in the access control cabinet market, MedixSafe began designing and manufacturing narcotics control cabinets in 2008. The first narcotics control cabinets were designed for the EMS market to be used in ambulances. Based on customer requests, MedixSafe designed and built different sized cabinets to meet their varying needs. MedixSafe caters to the key control needs of doctors, dentists, veterinarians, university research departments and schools of medicine, hospitals, wildlife management services, the U.S. Army, U.S. Navy, helicopter companies, gold mines, animal hospitals, Indian reservations, pharmacies, and more.
